

LANY JOINT EXAMINATION 2018

CHEMISTRY

PAPER 2

MARKING SCHEME

- 1.a) i) Alkali metals✓ 1
ii) Minimum energy required to remove an electron from the outermost energy level of an atom✓ 1 in the gaseous state.
iii) P has the smallest✓ 1 atomic radius. Therefore the outermost electron is strongly attracted✓ 1 to the nucleus hence more energy is required to remove it.
iv) - It melts because heat is produced✓ 1 during the reaction or reaction is exothermic.
- The hissing sound is due to the large production of hydrogen gas✓ 1 produced in a stream.
- Moves on the surface of the water due to being propelled✓ 1 by the escaping hydrogen gas.
- Floats on surface of the water because it is less denser than water.
v) $2Q_{(s)} + 2H_2O_{(l)} \rightarrow 2QOH_{(aq)} + H_{2(g)} \checkmark 1$
Accept $2Na(s) + 2H_2O(l) \rightarrow 2NaOH(aq) + H_2(g)$
- b) A strong base is fully ionised✓ ½ in water to produce many hydroxide ions eg KOH, NaOH or Na₂O✓ ½, K₂O while weak base is partially ionised✓ ½ in water to produce few hydroxide ions eg NH₃(aq)✓ ½ / CaO/Ca(OH)₂/Mg(OH)₂/MgO
i) Reaction between a base✓ 1 and an acid to form salt and water only or reaction between 1 mole of H⁺ ions and 1 mole of OH⁻ to form 1 mole of water.
ii) Add 200cm³✓ ½ of 2M HNO₃ to 200cm³ of 2M Na OH
- Heat / evaporate the mixture until saturation
- Allow the mixture to cool for crystals to form slowly
- Obtain the crystals.
iii) $2NaNO_3(s) \rightarrow 2NaNO_2(s) + O_{2(g)}$
2. a) - Cost - Heavy value
- Availability - Ease of storage
- Effect on environment - Ease of transportation
- b) i) $DT = 46.5 - 2.5 = 21.5$
 $DH = 450 \times 4.2 \times 21.5$
 $= 40635J \text{ or } 40.635KJ$
ii) Mass of ethanol = $125.5 - 124 = 1.5g \checkmark \frac{1}{2}$
RMM of ethanol = $46g \checkmark \frac{1}{2}$

1.5g of ethanol produces 40635
 46g of ethanol produce $40635 \times \frac{46}{1.5}$

$$= 1246140 \text{ J/mol}$$

$$= -1246.14 \text{ kJ/mol}$$

- d)
- Heat lost to surrounding air or apparatus
 - Error in reading temperature or mass.
 - Incomplete combustion of ethanol
 - A little of the ethanol evaporates as the burner cools.

Energy ✓ $\frac{1}{2}$ $\Delta H_c \checkmark \frac{1}{2} = -1246.14 \text{ kJ/mol}$

Reaction path ✓ $\frac{1}{2}$

3) (a) carbon $\rightarrow \frac{12}{44} \times 1.37 = 0.37$

44

Hydrogen = $\frac{2}{18} \times 1.12 = 0.12$

18

(b) Oxygen

(c)

C	H	O
<u>0.37</u>	<u>0.12</u>	<u>0.51</u>
16	1	16
<u>0.03</u>	<u>0.12</u>	<u>0.03</u>
0.03	0.03	0.03
1	4	1
e.f C H ₄ O		

(d) Is the existence of an organic compound with a movable functional group

e.g

(f) I (i) H₂

(ii) Ni , high temp

II Manf. of margarine

4). (a) (i) Dissolve carbon (IV) oxide in NaOH or KOH solution. ✓1

(ii) Air is cooled to -200°C and compressed ✓1 under high pressure to change it into liquid.

The liquid air is then warmed ✓1 and nitrogen having the lowest melting point distils out first at

-196°C.

- (b) (i) M = Hydrogen gas ✓1
 (ii) To oxidize all ammonia to nitrogen (II) oxide ✓1
 (iii) $\text{NH}_3(\text{g}) + \text{HNO}_3(\text{aq}) \rightarrow \text{NH}_4\text{NO}_3(\text{aq})$ ✓1
 (iv) (I) Since the reaction is exothermic, increasing the temperature to 600°C ✓1 lowers the yield of

Ammonia gas; High temperature decompose Ammonia ✓1 to Nitrogen and hydrogen

- (II) – Manufacture of fertilizers ✓1
 - Manufacture of Nitric Acid ✓1

Conditions if more than 2 and one is wrong penalise (1mk)

- (c) $\text{S}(\text{s}) + 4\text{HNO}_3(\text{aq}) \rightarrow \text{SO}_2(\text{g}) + 4\text{NO}_2 + 2\text{H}_2\text{O}(\text{l})$
 - Brown fumes evolved ✓1. Concentrated Nitric (V) Acid oxidizes Sulphur to Sulphur (IV) Oxide
 and itself reduced to Nitrogen (IV) Oxide. ✓1

- 5) (a) (i) Y ✓ $\frac{1}{2}$
 (ii) Has the highest reduction potential/is the weakest reducing agent ✓ $\frac{1}{2}$

- (b) (i) $\text{X}^{2+} + 2\text{e}^- \rightarrow \text{X}(\text{s})$ ✓1
 $\text{G}(\text{s}) \rightarrow \text{G}^{2+} + 2\text{e}^-$ ✓1

(ii)

- (ii) Complete the circuit.
 Maintain the balance of charge in the two half cells.

- (c) (i) $\text{Cu}^{2+}, \text{H}^+, \text{OH}^-, \text{SO}_4^{2-}$ ✓2

(ii) Electrode C $\checkmark^{1/2}$

(iii) Intensity of blue colour decrease $\checkmark^1$, As Cu^{2+} are oxidised to copper metal
 $\checkmark^1$

6a)i) P_1
 C_1
 $S_{1/2}$
 $A_{1/2}$

(2mks)

ii) II from the graph $99 \pm 1 \sqrt{1}$ (1mk)

16.5 secs ± 0.5

iii) All hydroxide peroxide has been decomposed /reaction has stopped. ✓
(1mk)

iv) on the graph /oxide
(2mks)

v) The solid acted as a catalyst
(1mk)

7) (a) (i) Graphite is inert and does not react with the chlorine gas produced.
(2mks)

(ii) By using a diaphragm of iron gauze screen.
(1mk)

(iii) $2\text{Cl}^-(\text{g}) \rightarrow \text{Cl}_{2(\text{g})} + 2\text{e}^-$
(1mk)

(b) Calcium chloride
(1mk)

(ii) To reduce the cost of production by lowering electricity cost.
(2mks)

(c) Hydrogen gas would be discharged at cathode instead of sodium because it has
a greater tendency to gain etc.
(2mks)

(d) Na_2O , Na_2O_2

- Sodium vapour is used in light bulbs to produce yellow glow.
 - A mixture of sodium and potassium is used as a coolant in nuclear reaction.
- (2mks)
